FIFRA 2(ee) Recommendation
For the management of additional [listed] weeds

Cheetah® Pro

EPA Reg. No. 228-743

This recommendation is made as permitted under FIFRA Section 2(ee)
and has not been submitted to or approved by the USEPA

Weed control at indicated label sites.

WEEDS CONTROLLED	APPLICATION
Bamboo Japanese Stiltgrass Miscanthus [Giant or Chinese Silvergrass]	Cheetah Pro can be mixed with other selective herbicides [triclopyr, clethodim, or fenoxaprop], non-selective herbicides [glyphosate] and preemergent residual herbicides [flumioxazin]. Follow the most restrictive label restrictions and precautions for each product. Thorough spray coverage of weeds is necessary to maximize weed control. Larger and more difficult weeds require a higher use rate. A combination with a selective and/or residual herbicide such as Turflon, Envoy Plus, Acclaim Extra, or SureGuard SC can provide systemic and residual control in treatment areas.
Note: For complete control, some of these species may require repeat spot applications and/or use of the highest specified rate.	

Weed Size and Stage	Rate of this product per gallon of water	Rate of this product per acre
Weeds less than 6 inches	1.25 fl.oz.	56 fl. oz.
Weeds greater than 6 inches	1.5-2.0 fl.oz.	65-82 fl. oz.
