

ArborScope™ is a landscape management software that allows tree managers to systematically track tree maintenance needs. Developed by Bartlett Tree Experts, ArborScope™ overlays an inventory performed by Bartlett Consulting on top of Google™ Maps to provide a simple and efficient means of viewing, updating, and querying any collected information.

## Individual Tree Details Page

Each tree in ArborScope™ has a dedicated Tree Details Page. This page provides the ability to enter in- depth information for each tree and keep records efficiently.

### Features

- Update Tree Location
- Archive a Tree
- Update Basic Size Information
- Add New Work Recommendations
- Communication with the ArborScope™ Support Team
- View Work History
- Upload Files
- Manage Tree Risk Information
- Upload Images

Tree benefit information (ecosystem services) from an i-Tree® Eco analysis also can be displayed through a built-in section on the Individual Tree Details Page. Adding a new tree to the inventory or removing an already inventoried tree are also very simple processes.

The ability for non-authenticated users (students, staff, neighbors, public) to interact with the inventory and basic tree information can also be granted through the creation of a public website and through the use of QR tags on the trees.
