

To provide a beautiful landscape while maintaining a healthy environment, MoniTor-R_X uses proven pest management treatments, the introduction of beneficial insects and other sound cultural practices.

“Bartlett's MoniTor-R_X keeps my property beautiful while protecting my family's environment. My children love it when Bartlett comes to release ladybugs. No wonder I'm impressed with the results!”

Maggie Barker, School Teacher

As part of MoniTor-R_x, a highly skilled Bartlett Arborist Representative will work with you to customize a plant health care program for your property. We'll back that program with our unique scientific tree care approach and commitment to safety and environmental stewardship, resulting in effective pest management that's right for you and your landscape.

Working Together for Effective Treatment

Consultation You'll work with an experienced Bartlett Arborist Representative from the beginning who will guide and assist you in developing a pest management program that is right for your landscape. MoniTor-R_x gives you complete control over the treatments applied to your plants.

Treatment MoniTor-R_x relies on innovative pest management techniques as well as the introduction of biological predators to naturally suppress pest populations.

Inspection MoniTor-R_x treatments must be carefully timed to be effective. Regularly scheduled inspections enable us to detect pests and disease before they spread and cause serious damage.

Cultural Practices We'll help you choose and grow healthy, pest-resistant plants. And, based on soil nutrient analysis, we may recommend natural-based fertilizers to increase plant vitality.

Local Service from Highly Trained Arborists

Each Bartlett office operates on a local level like a smaller company would except with all the advantages of a larger, international organization. Skilled arborists consult with you and expert crews perform their work with emphasis on safety and efficiency.

Your Bartlett Arborist Representative understands the unique needs of each plant species and will tailor a MoniTor-R_x program specifically for your landscape. We'll work with you to ensure you're comfortable with the products used on your plants and to select future plants that are known to resist common pest and disease problems.

Plus, we'll explain the full range of Bartlett services that complement MoniTor-R_x and can further bolster natural plant defenses.

The Knowledge & Support of Bartlett Science

For nearly 100 years, Bartlett has been providing tree care services. Scientists at our research laboratories are at the forefront of arboriculture and are continually developing new methodologies and techniques for the benefit of our customers.

In fact, all of the MoniTor-R_x pest suppression strategies and products we use must first pass a rigorous series of evaluations in our labs and on our research grounds.

In addition, a complete diagnostic laboratory means we can correctly identify, diagnose and treat difficult problems. No other tree care company has this unique facility or depth of scientific knowledge.

Commitment to Environmental Stewardship

Frances A. Bartlett founded Bartlett Tree Experts in 1907 with a mission to care for and preserve trees and shrubs. Since that time, Bartlett has been a pioneer in the tree care industry.

We believe our responsibility to our customers is one of sustainable environmental stewardship. That's why we've created MoniTor-R_x – to help maintain naturally healthy landscapes while preserving the environment and communities in which we live and work.
